

In August 2001, the management team, led by MD Neil Armstrong, took over the membrane and interface technology business from its previous owners, renaming the company Inztec - to reflect the forward-looking vision of our entire workforce and the high technology nature of our products and the markets where they find application.

Inztec is the best combination of start up and established manufacturer. At our facility in Kettering at the heart of the UK, we have been producing membrane panels and interface solutions for over 10 years - investing in state of the art production equipment, adopting the most rigorous quality and management control techniques, and developing a talented, multi-skilled, flexible workforce. With the enthusiasm and dynamism that a highly focused, dedicated team can bring - unencumbered by large corporate overhead - Inztec is ideally positioned to become the number one European supplier of high technology membrane panels and interface solutions.

your interface solutions provider

Membrane Switch Panels

From simple graphic assemblies to multi-layer polydome/metaldome embossed panel assemblies, Inztec provides one of the broadest and most cost effective product offerings in the market. Vertical Integration means we have the design capability, production technology and quality control in house achieving leadership in our field.

Rubber Key mats

Inztec provides the perfect solution to your rubber keymat requirements. Design and prototyping activities are performed in-house, giving an unparalleled commitment of 7-day turnaround for fully functioning prototype rubber keymats. After full approval, the production is transferred to our partner in the Far East, providing the most cost-effective solution.

Flexible Circuit Assemblies

State of the art printing and surface mount pick and place equipment, plus a wealth of experience in conductive adhesive technologies, allows Inztec to deliver an extremely cost effective alternative to hard substrate pcbs. Fully flexible, polyester substrate circuits incorporating SMD components have been manufactured by Inztec for over 5 years.

Front Panel Solutions

Inztec is committed to providing a total front panel solution - from concept to delivery. A multi-skilled, multi-disciplined workforce provides comprehensive design, material and component level logistic support. This combined with the implementation of our IPS (Inztec Production System) allows you the flexibility of manufacture and delivery of interfaces on a Just-in Time basis, lowering unit costs and allowing you to invest your assets in your core areas of development.

Agilent Technologies UK Limited

“ We developed a close working relationship with Inztec over many years. They are now involved at the conceptual stage of the design of our new products, contributing their design and interface manufacturing skills and capabilities. Agilent Technologies has been able to reduce its costs and inventory by outsourcing key assemblies, consequently enabling valuable floor space to be freed up space for our core activities of final assembly and testing. We have increased the value of the output per square foot in these areas significantly. ”

Graseby UK

“ By working closely together in a collaborative relationship, Inztec have helped us achieve our prime objectives. Without sacrificing quality or any other aspect of specification we have significantly reduced actual unit price and introduced operating methods which have reduced our stockholding and drastically reduced lead times for our regular key items. Flexibility and a very positive attitude are amongst Inztec's key strengths. ”

NCR Waterloo

“ When we ran short of a critical membrane switch which would result in the production line being shut down we called Inztec only to find that no order had even been placed by the contract manufacturer. The management and production team at Kettering agreed to produce small batch quantities of our custom switch membrane after regular hours. The first batch shipped 48 hours after my initial call for help. Inztec's efforts and their dedication demonstrates the care they have for their customers and the exceptional performance allowed NCR Waterloo to minimise our down time. ”

Innovation

'Growth through Innovation' is one of the companies core strategic objectives. Innovation is therefore not just a buzz word within Inztec; it is a way of life for all its employees. Together with significant investment plans, dedicated resource and continuous focus, our team provides generic and custom solutions to successfully solve your interface problems. Utilising the latest technologies and providing unique applications delivers to our customers not just cost effectiveness but a real competitive advantage. We have already made significant advances in flexible circuit technology, transparent switch panels, secret lit and ultra thin display technologies. In addition, we are also the first UK membrane solution provider for the innovative Duraswitch technology providing unequalled durability and environmental sustainability in a switching environment. This product line-up and the continuous development involving a team approach gives Inztec the competitive edge when it comes to adding more to our customers business than merely a supply relationship. We provide a partnership for the future.
